PRECISION TOOLS FOR THE LOCKSMITH PROFESSION

BDK 
Blue Dog Keys

NEW MUST-HAVE TOOLS FROM FRAMON

IMPRESSIONING TOOL

Another quality product by Framon Manufacturing Co. that makes key impressioning easier than ever. This tool is self-contained; it needs no wrenches and has no screws to strip out. This tool holds practically any key blank; keys will not rock or slip. The firm hand grip provides complete control when impressioning keys. **PART # IMMS001**

SFIC PINNING / CAPPING BLOCK (CPB1)

Another great tool from Framon Manufacturing for locksmiths who use interchangeable core. The CPB1 comes with a pinning / capping block, ejecting pin and capping tool. Insert the core into the tool and eject the old pins quickly and easily. Flip the block over to load the chambers and cap the core. Made in the USA. **PART # CPB1**

KABA PEAKS PINNING / CAPPING BLOCK (CPB140)

A great tool for locksmiths using Kaba Peaks .140 cylinders. The CPB140 comes with a pinning / capping block, ejecting pin and capping tool. Insert the core into the tool and eject the old pins quickly and easily. Flip the block over to load the chambers and cap the core. Made in the USA. **PART # CPB140**

BULLSEYE INSTALLATION JIG

Framon is proud to introduce our latest product, the Bullseye Installation Jig. The new installation jig will assist installers with drilling wood or metal doors, both 2-3/8" and 2-3/4" backset. The tool is completely self-contained besides a 3/32" allen wrench to change bore sizes. The tool also features two 1/8" locating holes at 12 & 6 o'clock to locate through bolts on popular lever locks. **PART # BULL**

TUBULAR LOCK SAW (TLS1)

Framon's TLS1 Tubular Lock Saw allows you to quickly and easily open tubular locks when the key is lost. The TLS1 drills out the bottom pins, giving you the ability to simply insert a blank tubular key and open the lock. The TLS1 fits in any 3/8" or 1/2" drive drill. Call & order yours today! **PART # TLS1**

ABOUT OUR CATALOG

Framon Manufacturing Company began producing key machines for the locksmith profession in 1971. For years our exclusive focus was on key machines for that trade. With the advent of the DC- 300 in 1988, we began to produce key machines for the automotive market as well. Retail locations are also a frequent user of our duplication equipment. In order to help you decide on which machine may be right for your application, each machine will carry the following icons:

Learn More About Framon32

HOW IT ALL STARTED

Framon Manufacturing Company, Inc., was founded by Frank and Barbara Agius, officially in 1971. Below is a short history of the company and some of our major milestones (among other events!). Frank passed away in May of 2003 and Barb in January of 2021. The company was passed on to their children in 1995 after Frank's retirement. In addition to the manufacturing business, the family locksmith shop, which has also evolved into doors, hardware and automatic operators, continues to operate in the same building. Besides one machinist, all Framon employees also work daily in the locksmith shop and test our new products there regularly. Visit the Frank's Key & Lock Shop website - www.frankskeyandlock.com! Enjoy our new catalog and thanks for your interest in Framon products.

Framon Manufacturing Company, Inc

TIMELINE

1955 – Frank & Barb Agius move to Alpena, Michigan from Detroit. Frank opens his own cabinetry business with Barb helping out with bookkeeping duties

1959 – As the need for custom cabinetry begins to wind down, Frank becomes interested in lock work at the suggestion of one of his salesmen. He takes Leonard Singer's correspondence course and begins his career as a locksmith.

1967 – Unhappy with the machinery available to him, Frank designs a key origination machine for his own use. The original machine would become known as the Framon #1 Code Machine. Frank begins work to patent the new invention.

1970-71 – Word of Frank's invention spreads and catches the ear of Sam Solomon, owner of Hugo Solomon & Sons, a locksmith supply company in Detroit. Sam and Frank agree to form a company and market the machine. Putting their names together, "Framon Manufacturing Company" is born. Several of Frank's business associates invest in the company. The first production machine is sold to W E Phillips in New York. Framon is operated out of the family's home in Alpena along with "Frank's Key & Lock Shop".

1975 – With the introduction of Medeco keys that utilize rotating pins, Frank modifies the machine to be able to make angled cuts. The Framon "#2 Dual Code Machine" is produced concurrently with the #1 fixed-spindle version. The #2 will quickly begin to outsell the #1 machine and become the company's flagship machine for over 45 years.

1982 – After a decade of promoting his new code machine, Frank turns his attention to tubular keys. The TKM-100 machine is designed and patented.

1983 – Frank recognizes the need for a new facility and purchases property at 909 W Washington Avenue in Alpena which would be the company headquarters for almost 40 years.

1985 – Frank joins forces with Bill Reed of the Locksmith Ledger and begins touring the country providing free education to locksmiths. The "Frank and Bill Show" makes stops throughout the United States, Canada and Europe over the next 20 years. Other experts in the field will join up with the pair, including Hank Spicer, Steve Young, Gerry Finch, Jerry McNickle, Mark Miller, Michael Miller, Gale Johnson and Joe Bucha. The educational program will eventually be known as "Ledgerworld" and make more than 300 stops, educating almost 10,000 locksmiths at no cost.

1986 – Recognizing the need for an accurate flat steel duplicator, the DBM-1 flat steel key duplicator is invented. Framon now has three code machine offerings and a duplicator.

1987 – A full machine shop is added to the 909 Washington property so almost all production is done in-house. A Fadal CNC machining center is purchased as well as other basic machinery. Frank buys back all of the stock of the company, which is now family owned and operated.

1988 – Assa High Security Locks contracts with Framon to produce a dedicated machine to cut their Twin 6000 keys. The modified Framon #2 machine would be known as the PS-6000T. At this time Framon also introduces a new patented machine, the DC-300. The machine will code cut and duplicate edge cut keys utilizing space keys and depth cams. Several companies in the UK order the machine for their end users.

1990 – With the introduction of high security automotive keys, Frank works jointly with his engineer Darrel Sims to produce a small milling machine to be known as the Sidewinder duplicating machine.

1992 – Framon's first semi-automatic duplicator for cylinder keys is introduced, known as the Express.

1990's – Throughout the 90's Framon introduces several locksmith tools and continue to be a leading locksmith supplier. Trade shows and education continue to be strongholds for the company.

1995 – Frank Agius retires and turns the company over to his two sons and daughter.

1997 – The KX-1 Code Machine replaces the Assa PS-6000T, adding functionality so that a user can change from one manufacturer to another with replacable cams, cutters and vises. Framon jumps into the automatic key cutting market with their first version of the FRA-2001 Computer Driven Code Machine. The machine will originate almost any edge cut key in the market.

2000's – The turn of the century sees Framon spread into the automotive industry, competing with giants such as Curtis, Ilco, and Silca. Framon grows as a supplier of key machines for the detention industry.

2000 – The MD-1 Manual Key Duplicator is introduced. At this time Framon establishes a relationship that will last more than two decades with Gale Johnson. Gale was given permission to turn the famed Reed Code System into a computer program originally known as Computext, which was sold by the Locksmith Ledger. With the Ledger being sold, Gale and Framon partner up to turn the program into a Windows version. Thousands of locksmiths around the globe utilize the program to retrieve key codes. The program will eventually be known as "Genericode" or simply "Gcode". Gale would pass away in early 2021 with Framon purchasing his share from his family.

2010 – Framon introduces the JD-12 duplicator for paracentric and mogul-style detention keys.

2014 – Framon partners with Laser Key Products to provide codes for their line of automatic key machines. Gcode is modified to send cutting information to the 3-D Pro, Xtreme and eventually the Elite.

2015 – Framon purchases the assets of the Blue Dog Key Company, after owner Liam Gribben passes away. Framon will move the company to Michigan, expand the product line and set up an online catalog to assist in "odd key" searches.

2018 – After almost 40 years in the same location, Framon moves to a new 6600 square foot building on the main street of Alpena. Frank's Key & Lock Shop and Framon continue to share the same building and complement each other as sister companies. Product development is largely driven by needs from the lock shop.

2024 – Framon expands into the RV and camper market, offering master keys, change tools, and lock cores to locksmiths worldwide—while also providing education and training on how to profit in this growing, lucrative sector.

OUR PRODUCTS ARE BUILT TO LAST!

All journals are mounted on ball bearings for accuracy and durability. These features are the trademark of Framon Manufacturing Company. We feel that only precise equipment will produce precise work.

FRAMON KEY MACHINES ARE A GREAT EXAMPLE OF PRIDE OF WORKMANSHIP!

Our machines are built from steel and aluminum. Each machine is hand-fitted and thoroughly tested before shipment. Sealed ball bearings are used throughout the machine for long life and durability. Other machines use small gears, bushings, and plastic in their build. Framon machines are perfectly happy in the shop or in the van. A bumpy ride in a service van, extremely hot or cold climates won't affect the accuracy of the machine.

CLOSE TOLERANCES MAKE FOR PRECISE CUTS!

The Framon #2 is accurate to .0005" (one-half thousandth, about the thickness of a piece of hair) in both spacing and depth. What are the spacing and depth tolerances of the other machines you are considering? Do they publish tolerances, or just say "It's accurate!"?

NO ROOM FOR MAKING MISTAKES!

The Framon #2 features a straight in feed. This means that the key always approaches the cutter at a 90° angle, and the cut depth on both sides of the cut are the same. Other machines use a pivoting feed, similar to most duplicating machines. The end result? Shallow and deep cuts typically have a "high" and a "low" side. This can lead to keys that turn the lock in one direction but not the other. **Our cutters are made of hardened steel or carbide and ground to tolerances of plus or minus one-half thousandths of an inch.**

"I operate three mobile vans and have three Framons on them. Two of them are #2's and the other is a #1 (DC). As you can probably guess I wouldn't be without these machines. I have called Phil on several occasions to ask questions or order replacement cutters and he has always been extremely helpful. When I find someone who gives excellent service I very much appreciate it."

-Ed Humes, Locksmith Service Inc.

JUST ASK US!

What kind of customer service can I expect? One of the most important factors in your decision should be support after the sale. At Framon, key machines aren't our only business. We also run a full-service locksmith shop, just like you. When you call with questions on your machine you're not just talking to one of the folks that make the machine, we're also locksmiths. We know all about the things you run into from day to day. The person that answers the phone can usually help you out or quickly or transfer you to someone who can.

GREAT SOFTWARE, AN INVALUABLE RESOURCE

Our Genericode program is known throughout the industry as one of the most comprehensive code programs available. Whether you are a locksmith or automotive dealer, Genericode makes the job of looking up key codes and cutting keys easier than ever. Gcode includes sixteen "programs within a program", allowing you to look up cuts by key code, key blank, and a variety of other ways. Know the cuts (or just a few) but not the code number? Use Gcode's progression program to determine the key code or show a progression list. Gcode will send cutting information to the ITL 950, 9000, HPC Codemax, Framon FRA-2001, and Laser Key Products Xtreme and Elite machines.

WE STAND BEHIND OUR PRODUCTS!

What type of warranty is included with the machine? If you want to know how confident a manufacturer is in their product, take a look at their warranty. Framon machines carry a one year parts, labor and freight warranty. Any Framon machine found defective in the first year is picked up at your door, repaired or replaced, and dropped off at your door absolutely free! With others, you will most likely pay the freight to get the machine back, and then you can take a number and wait for the repairs to be done. If your machine needs attention after the warranty has expired, it comes in one day and goes out the next. We build an excellent product and back it with a superior warranty. It's easy to do, since repairs are a rarity at Framon!

"Dear Phil, Thank you very much for the new depth and space manual you sent me. I have a very small shop, and most of the time I get the run around from the other companies. I, like you, think people are important. Framon is one of the few companies that put people and the customer first. I have never had a company respond the way Framon did. My little request was just as important as a big order. Once again, thank you so very much. My #2 arrived in perfect condition, and being a machinist myself was adjusted perfect, right on the numbers."

-Scott R. Meister, Scott's Lock & Key Shop

RECOGNIZED THROUGHOUT THE INDUSTRY AS THE MOST ACCURATE & DURABLE CODE MACHINE AVAILABLE

“This is more than a key machine - it is a key origination system”
National Locksmith Article

That alone is probably the best way to describe the Framon #2 Code Machine. When you choose the #2, you enable yourself to originate almost any cylinder key in use today. Here are just a few of the keys you'll be able to cut with the #2:

- Standard Cylinder
- Domestic Automotive
- Foreign Automotive
- Motorcycle Keys
- Padlock Keys
- Letterbox Keys
- Safety Deposit Box Keys
- Interchangeable Core
- High Security Keys
- Tibbe 6 & 8 Wafer Keys
(with optional vise & cutter assembly)

POSSIBLY THE MOST PERFECT CODE MACHINE EVER CREATED

All of the extras included with the Framon #2 make it a great package. Here are a few of the features that make it a perfect code machine:

Accuracy: All Framon key machines are hand assembled and hand fit. This ensures that before your machine reaches you, it has originated keys accurate to one-half thousandth of an inch (.0005", about the thickness of a hair). This tolerance assures a perfect key every time!

Straight-In Feed: The #2 utilizes a straight-in feed approach. The straight-in feed of the #2 provides a perpendicular cut at the root of the key. The flat of the cut will always be the same depth from the left side of the cut to the right. Machines that use a pivot approach can produce keys that turn one way but not the other. The drawing at the right shows the profile of a key cut by a machine that pivots. The different shear lines from the left to the right side of the key lead to the turning problem.

Rugged & Durable: The #2 is made from heat treated aluminum and steel. The carriage moves forward on a pair of steel slides. Spacing and depth movements take place on pairs of steel pins and screws. There are no small gears to strip out and no plastic parts to wear out. We've heard plenty of stories from code machine owners who have dropped the machine off of their workbench and cut a key with no adjustments needed!

THE REAL BEAUTY OF THE MACHINE IS ITS LOW COST

In addition to being less expensive than almost any other code machine, keeping your #2 up to date is simple and inexpensive as well. For those of you who enjoy a hard copy of information, use the blank pages in the back of the book to add new depth and space information from sources like trade magazines and locksmith forums online. The included Genericcode key code program contains hundreds of additional charts and keeping that updated yearly will give you access to new depth and space information as well.

FRAMON #1/#2/#2J
 Available with 110V AC motor (standard)
 220V AC or 12V DC motors (upcharge)
 Dimensions: 10 1/2" W x 17" D x 8" H
 Weight: 36 lbs.
 See page 30 for optional cutters

**CUTTING KEYS BY MEASUREMENT
UNEQUALED ACCURACY & SIMPLE TO DO**

The #2 utilizes actual space & depth information to cut keys. Here's how it's done...

Figure #1

Figure #2

SPACING:

To cut a key, you need two dimensions: starting cut (distance from the shoulder to the first cut) and spacing (distance between cuts thereafter), both found in the Depth & Space Manual or in your Genericcode program. Schlage cylinder keys use .231" starting cut and .156" spacing. Starting cut is set by zeroing the machine and counting out to .231". Once set, the spacing block with .156" is aligned. Cut to cut spacing is a simple matter of aligning two index marks. Depth movements take place on pairs of steel pins and screws. There are no small gears to strip out and no plastic parts to wear out.

DEPTH:

Depth settings are made in .001" increments by means of a micrometer. As shown at the left, reading a micrometer is quite simple. Figure #2 shows a micrometer reading .225". The scale shows the pointer is between .200" and .250". The dial reads .025"; add .025" to .200" and you have .225". The micrometer depth reading is what gives the #2 its' extreme accuracy. Once familiar with the machine, you'll be code cutting keys in 30-45 seconds.

The Framon Depth & Space Manual is the core of the Framon #2. The keys mentioned above are only a portion of those that you will have the capability to cut. Key cutting information can also be found in Genericcode, which you will also receive with your #2 Code Machine.

The manual contains over 800 cylinder, letterbox and safety deposit charts.

FRAMON #2J DETENTION CODE MACHINE
THE RENOWNED #2 CODE MACHINE MODIFIED FOR DETENTION USE

The Framon #2J packs all of the features and benefits of the Framon #2, and adds everything you need to cut Folger Adam, Mogul, Southern Steel, and Adtec keys. A special vise is included with the machine to clamp the larger keys. An extension is added to the spacing crank to avoid interference with the head of these larger keys. In addition to cutting all of the detention keys, the #2J can still be used to cut almost any cylinder key you'll come across. If detention key cutting is your line of work, the #2J is your machine!

EVERYTHING YOU NEED IN ONE PACKAGE

At Framon, we don't believe in a lot of optional equipment. Here is everything you get when you buy a #1, #2 or #2J Code Machine

STANDARD ON ALL FRAMON #2 & #2J MACHINES

DID YOU KNOW?

Framon also stocks almost every Ilco key blank (non transponder) as well as over 1200 "BD" and "UK" keys – hard to find key for RV's, heavy equipment and hundreds of other applications! Check them out at www.bluedogkeys.com

COMBINES EXTREME ACCURACY AND EASE OF USE

Tired of mis-cut keys due to outdated equipment? The DC-300 combines extreme accuracy (one-half thousandth of an inch) with a simple space key and depth cam system. The DC-300 can both code cut keys as well as duplicate, saving money by utilizing one machine to do both jobs.

EASY TO USE

To code cut keys on the DC-300, insert the proper space key and depth cam into the machine. Turn the depth cam to the proper depth, line up the space key with the proper space position, and push the carriage forward to make the cut. Repeat this procedure for the rest of the cuts on the key. Keys can be code cut in less than 30 seconds.

DUPLICATION IS EVEN EASIER

Turn the depth cam to any number 1 depth on any cam. Insert the original and blank key, and push the carriage forward to make each cut. Duplication takes less than 20 seconds. The DC-300 also features a deburring brush, available in wire or nylon.

SAVES MONEY

Since the DC-300 can both duplicate and code cut, there is no need for two machines. Both tasks are easily done on one machine!

HIGHLY ACCURATE

The DC-300 is precision engineered, and is constructed of steel and aluminum. The machine rarely needs to be adjusted, and holds tolerances of .0005". Sealed ball bearings are used throughout the machine, ensuring years of use. The only maintenance required on the DC-300 is a regular cleaning and few drops of lubricant on the slide rod and depth plunger.

EASILY UPDATEABLE

As new code series are introduced, the DC-300 can be easily updated. In most cases, only a space key is required. Occasionally, a new depth cam will be needed as well. Pair the DC-300 with our Genericode ME software on page 16 for the ultimate in key cutting ease!

LEADING THE INDUSTRY IN TUBULAR KEY CUTTING

Framon's TKM-100 is known throughout the industry as the foremost machine in tubular key cutting. Everything you need to originate almost any tubular key in use today is included with the TKM-100:

- TKMS451Dial Indicator
- TKSH107Chicago/Dynalock/Unican Cam
- TKSH109Fort/American Cam
- TKMS102Ace Spacing Plate
- TKMS103Offset Right Plate
- TKMS104Offset Left Plate
- TKMS105National Keyset Plate
- TKMS106Ace Change-a-Matic Plate
- TKMS107Segal 8 Pin Plate
- TKMS108Universal Spacing Plate
- F2MS4021/8" Allen Wrench
- TKMS4013/16" Allen Wrench
- DCMS4023/32" Allen Wrench

ONE COLLET FOR ALL YOUR NEEDS

The TKM-100 features a collet that can accommodate all three size tubular keys. No fumbling with changing jaws or adapters. Simply tighten the chuck closer - the self adjusting collet easily accepts any size key (Diameter .365 - .406).

MAKE ANY TYPE OF CUT AND LOTS OF THEM!

With the TKM-100 you can make regular cuts, ward cuts, and master cuts. The machine is equipped with a carbide cutter, which means you can cut brass or steel and get long cutter life.

WHY CODE CUT WHEN YOU CAN DUPLICATE?

Probably more than any other type of key, a tubular key wears very quickly. Due to the constant pressure on the face of the key, even original keys can be off .001" - .003". By using a duplicator to make a key, an inaccurate copy of a worn key is being made. When you use the TKM-100 to code cut a key, you'll be making an original key, accurate to .001". A precision dial indicator is included with the machine, which enables you to decode a tubular keys for duplication. Decoding takes only a few seconds.

SOME OF THE KEYS THAT CAN BE CUT ON THE TKM-100™

"I have to say that Framon really does have the best customer service out there. You add that to a machine that lasts a lifetime and does all you need in the code department and you just can't go wrong buying a Framon. It's pleasure to deal with someone who treats you like they appreciate your business."
-George Henderson, Another satisfied customer

TKM-100
 Available with 110V AC motor (standard)
 220V AC or 12V DC motors (upcharge)
 Dimensions: 8" W x 14" D x 10" H
 Weight: 33 lbs.

FULLY AUTOMATIC CODE CUTTING

The FRA-2001 is packed with features you'll use daily. More than just a computerized code machine, here is just a sampling of the machine's capabilities.

THE MACHINE

The FRA-2001 machine is completely controlled through a serial cable by our Genericcode ME software (see page 20 for more information). The machine has no keypad or identification numbers to be confused by when trying to cut a key. Once information is sent, the machine can cut a six-pin key in about 15 seconds. The two servo motors are covered by a two-year warranty, and the control box is covered by a lifetime warranty. Ball screws and sealed ball bearings are used for smooth motion on both axes. A reversible vise is included with the machine, complete with shoulder and tip stops. The FRA-2001 does not have the capability to make angled cuts for Medeco keys.

THE SOFTWARE - LOOKUP & CUT A KEY BY MANUFACTURER

In the Manufacturer's section, the Genericcode software allows you to cut a key when the bitting is known. You can search alphabetically by manufacturer's name, series or key blank number. Enter your own information for new series, or make a customized chart. All database information is completely editable. Once you have chosen the chart you wish to cut a key for, simply enter the cut numbers and click the "Cut Key" button. If you simply want to generate a random key bitting for rekeying purposes, click the random icon and a bitting will be generated. The software enables you to plunge cut or laser (profile) cut the key. An image of the key to be generated can be viewed with the click of a mouse.

LOOKUP & CUT A KEY BY CODE

The Codes section allows you to look up almost any domestic or imported code you'll run into. You can also search the database by key blank or partial cuts. The program will also show a progression chart for any partial code you enter. Once the code or progression is determined, use the machine to originate your key.

MACHINE HISTORY: LOOKUP KEYS CUT ON THE MACHINE PREVIOUSLY

The software includes a History database, where you can enter your customers' name and other pertinent data to link with a key you have cut on the machine. Easy retrieval in the future is a snap - simply click the mouse and your key is ready to be originated!

APPLICATION SETUP SECTION

All movements of the FRA-2001 Code Machine are completely controllable by the user. If the machine ever needs adjustment, depth and spacing are adjusted from the Machine Section. Feed rate and other machine functions are also adjusted from this section.

FRA-2001
 Available with 110V AC Motor
 or 220V Motor Available at Extra Charge
 Dimensions: 14" W x 15" D x 11" H
 Weight: 65 lbs.

REVOLUTIONIZING HIGH SPEED CODE CUTTING

The KX-1 is designed to quickly and accurately code cut cylinder keys, and in particular, high security keys. The KX-1 uses interchangeable depth and space cams to cut just about any cylinder key in use today. The cams take only seconds to interchange, and no adjustment is needed from one manufacturer to the next.

The machine has been tested thoroughly on locks such as Medeco, Assa, Schlage Primus, Kaba PEAKS, and Best. Assa offers the KX-1 to their end users for cutting Twin 6000 and V-10 keys.

The machine is capable of cutting keys accurate to .0005" in about fifteen seconds. For interchangeable core type keys, the vise has a built-in tip stop. For others such as Medeco or Schlage, a shoulder stop properly aligns the key.

When switching from one manufacturer to another, simply remove an allen screw to take the cam off of the machine. Reinstall the screw to put the new cam on the machine. Of course, depending on which type of key you plan on cutting, a cutting wheel change may also be necessary. Patented keys such as Medeco KeyMark may also need a vise change to properly hold the key.

When purchased, the KX-1 comes set up for whichever manufacturer you prefer. Additional cams, cutters and vises can then be purchased separately based on your needs. Kits are available for a variety of manufacturers - See page 15.

The KX-1 is ideal for institutional locksmiths using only one or two key systems. Locksmiths who do large masterkey systems or routinely cut high security keys will also appreciate the new KX-1.

A prefix is needed to specify which cams will be on the machine. Please see the kits on the next page to determine the correct prefix. Example: For a KX-1 with Schlage cams and cutter, the order number would be KX1-SC.

"Since 1988, ASSA has been furnishing our end users with the KX-1 code machine. We know we can count on the machine to make key cutting an easy job. It is the most accurate and precise key machine we have found for cutting our high security ASSA key blanks. Add to that the fact the machine rarely needs adjustment - a great key machine in every way!"
-Tom Demont, AHC/C ML Former National Sales Manager

KX-1™
 Available with 110V AC motor (standard)
 220V AC or 12V DC motors (upcharge)

*Kwikset Titan models are shipped with the FC9090 cutter. A separate charge (included upon request only) will be added for the FC4590T cutter for making the first cut next to the shoulder of the key, which has a 90 degree angle at the bow side.
 **This configuration only for older 0-100, 200-300, 400-500 series.
 ***The Southern Steel A1 machine is NOT capable of any interchange with other cams or key series.

THE QUICK AND EASY WAY TO DUPLICATE KEYS

The MD-1 is a manual duplicator designed for locksmiths, automotive dealerships, and hardware stores to cut a wide variety of keys without the need of additional accessories.

HERE ARE JUST A FEW OF THE FEATURES OF THE MD-1:

- Can accept keys up to 4" in length
- 1-7/8" of cutting travel
- Wire deburring brush included (nylon also available)
- 1/6 hp motor included (12 volt available - upcharge for 12 volt motor)
- Reversible vises hold a wide variety of keys without tipping
- Flip-down key stop for aligning shoulders or tips of keys
- Adjustable guide (.001" increments)
- Carriage wipers to keep chips off of yoke rod
- Sealed ball bearings in spindle assembly

Framon's MD-1 offers you the ability to cut almost any cylinder key in use today. Keys can be cut quickly, easily, and accurately. If adjustments are ever needed, they can be made in .001" increments. The MD-1 carries Framon's one-year, parts, labor and freight warranty.

MD-1™
 Available with 110V AC motor (standard)
 220V AC or 12V DC motors (upcharge)
 Dimensions: 12" W x 15" D x 6" H
 Weight: 29 lbs.

MAKES FAST WORK OUT OF FLAT STEEL KEY DUPLICATION

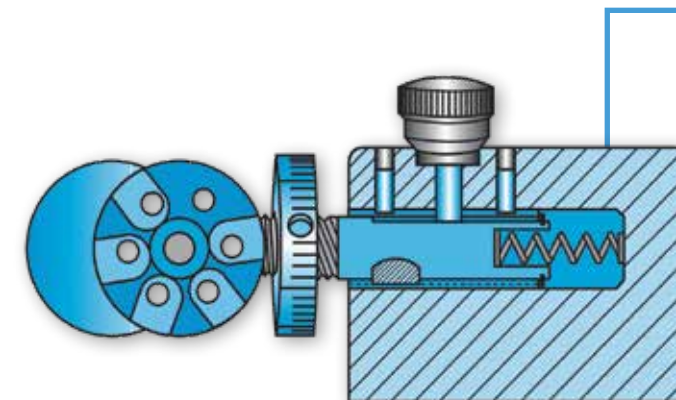

SAFETY DEPOSIT BOX KEYS
 Diebold, Master, Yale Sargent & Greenleaf Victor, LeFebure, HHM, York.

LOCKER & LETTERBOX KEYS
 Yale, National Eagle, Auth, Couch, Florence,

PADLOCK KEYS
 Single and double sided Master.

ALL THE QUALITY YOU'VE COME TO EXPECT FROM FRAMON

The Framon DBM-1 is designed to cut safety deposit box, locker, and padlock keys. This specialized flat key duplicator will duplicate blanks up to 3 1/2" long. The DBM-1 features a wire deburring brush (nylon also available) and carbide cutter.

ROTATING GUIDE FOR DIFFERENT CUTTER WIDTHS

The DBM-1 features a rotating guide which can be paired up to six different cutter widths. Widths available in .035", .045", .055", .066", and .088". A .100" cut can be made by pairing the .045" and .055" cutters.

THE FRAMON DBM-1: DESIGNED TO DO ONE JOB AND DO IT RIGHT

Depth adjustments can be made in .001" increments. As with all Framon products, sealed ball bearings are used in the spindle. Built-in rod wipers keep the carriage rod clean as you cut keys.

You can expect years of trouble-free service from your DBM-1. Cut Master Padlock corrugated keys, locker, letterbox, and safety-deposit box. Even cut two keys at a time!

Rotating stylus changes easily to 6 different guide widths of .035, .045, .055, .066, .088, .100.

Precise adjustments - no guesswork.

Guide easily locks in rearward position for easy tip alignment, no spring pressure.

DBM-1™
 Available with 110V AC motor (standard)
 220V AC or 12V DC motors (upcharge)
 Dimensions: 10.5" W x 16" D x 6.25" H
 Weight: 33 lbs.
 See page 30 for optional cutters & accessories

TAKING PRECISION DUPLICATING TO THE NEXT LEVEL WITH SMOOTHER USER CONTROL

PARACENTRIC GUIDE & .066" CARBIDE CUTTER KIT PART # JD-1266

PARACENTRIC GUIDE & .088" CARBIDE CUTTER KIT PART # JD-1288

PARACENTRIC GUIDE & .103" CARBIDE CUTTER KIT PART # JD-12103

If you need to duplicate detention keys, the JD-12 is for you. The machine is designed exclusively for detention keys such as paracentric & mogul.

Designed on the same principles as other Framon key machines, the JD-12 incorporates cnc-grade linear ball bearings on both the X & Y axis, as well as hardened rods. This gives the machine an extremely smooth motion & allows precise user control. Similar to our Sidewinder high security automotive duplicator, a control lever is mounted on the left side of the machine to control carriage movement.

An interchangeable guide allows the machine to be converted from cutting paracentric-style keys to cutting mogul keys. All cutting wheels for the machine are made of solid carbide. Changing the machine over from paracentric to mogul takes approximately one minute. The JD-12 is preset at the factory to cut paracentric keys; the mogul kit (part number JD-12MK) is available separately.

Like other Framon machines, the JD-12 is covered by our exclusive one year, parts, labor and freight warranty.

JD-12™
 Available with 110V AC motor (standard)
 220V AC or 12V DC motors (upcharge)
 Dimensions: 12" W x 16" D x 10" H
 Weight: 35 lbs.

SMALL AND COMPACT, THE SIDEWINDER CAN HANDLE ALL OF YOUR NEEDS

The compact Framon Sidewinder has been the professionals' choice since it was introduced to the market in 1990. It is designed to quickly and accurately duplicate automotive high security keys such as Mercedes 2 & 4 Track, BMW, Lexus, Infiniti, Volvo and Saab.

A COMPLETE KEY CUTTING "STATION"

When you choose the Framon Sidewinder, you don't just get a duplicating machine. Four cutters come standard with the Sidewinder. Two 5/32" and two 3/32" cutters come with each machine. The 5/32" is used for cutting most externally cut high security keys. The 3/32" is used for center cut keys such as Lexus. These cutters are made of carbide and cobalt for long life and durability.

You'll also receive Free Volkswagen/Audi Vises for the machine. No need to purchase any additional components to do the job.

EASY OPERATION

The Sidewinder now features a lever on the left side of the machine to control all carriage movements. We've updated the table for extremely smooth movement. In addition, our vises do not require adapters or additional clamps to hold any keys. Two sets of reversible vises hold every high security automotive key you'll come across. The Sidewinder also has a storage drawer under the machine to hold cutters, vises, and tools. Setting up the machine takes less than a minute, and duplicating a key can be done in about 30 seconds per side. The feature don't stop there...

DURABLE CONSTRUCTION

As locksmiths around the world have come to expect, ball bearings are used extensively throughout the machine. Aluminum and steel construction means you are buying a machine that will hold its' tolerances and hold up to rough use. Make the best choice - the Framon Sidewinder.

Sidewinder duplicators can be upgraded to the Sidewinder 2 Code machine at a later time.

"I own one of your Sidewinder key machines. I tried all of the others at a show and found that yours was the best suited for originating keys. I've had it for about 2 years now and have never had a problem with it."
 - Ken Cox, Eugene, OR

Note: Our Sidewinder machine is designed as a duplicating machine, but with space and depth keys, you can originate side-milled keys with it.

SIDEWINDER™
 Available with 110V AC motor (standard)
 220V AC or 12V DC motors (upcharge)
 Dimensions: 6" W x 14" D x 10" H
 Weight: 33 lbs.
 See page 30 for optional cutters & accessories

MORE THAN JUST A CODE LOOKUP PROGRAM

GCODE Desktop: The Total Code Retrieval System

FEATURES OF GCODE

- General Code Program: Lookup key information from a code number
- Utility/Vehicle/Motorcycle/Padlock Programs: Lookup key information by manufacturer, model, and input codes or cuts.
- Key Blank Search: Don't know the manufacturer? Find out if you know the blank number.
- Depth & Space Program: Lookup depth & space information for virtually any lock in use today.
- Progression Program: Displays a chart to progress keys when only partial cuts are known.
- Sidewinder Codes: View a full list of all known Sidewinder key codes in the program.

Key blank information is shown for the following manufacturers: Ilco Standard, X, E-Z, Dominion, Curtis, Jet, Star, ESP, Borkey, Silca, Orion, and Original.

In addition, Genericode™ displays the keyway and cut key profile. Key cutting information is included for Framon, HPC, ITL, Ilco, A1, Silca, and Laser Key Products key machines. Genericode will download cuts to the Framon FRA-2001, ITL 950/9000, and Laser Key Products Xtreme and Elite.

Some code programs boast of their numbers of codes included, claiming over two million; Genericode™ contains over 750,000 codes for combination padlocks alone! Add to that over 200,000 codes for ten cut GM and over 100,000 for ten cut Ford; doesn't two million seem a little light? Genericode™ contains well over 4,500 code series, ask others how many they have....

....Add to that a key blank cross reference program and a motorcycle model database and you get the complete code lookup program.

Other companies are happy to sell you a code retrieval program, another program for progression charts, and another for missing cuts. Genericode™ gives you all of these programs at once, and you can run any of them out of the same window.

Unlike other programs, Genericode is licensed to your location; you may install it on all computers in your shop or your trucks. Additional authorizations are not needed. Also, yearly updates are optional; you are not forced to pay for an update every year.

Genericode runs on Windows Operating Systems.

GCODEONLINE

Prefer not to carry a laptop? Sign up for a yearly subscription to Gcodeonline at www.gcodeonline.com. The online version will not send cutting information to electronic machines but will print HPC cards, handle key progressions and has all of the features that our desktop version has!

FRAMON MANUFACTURING FRAME DIMPLING PRODUCT, THE DT-1

The DT-1 tool is designed to aid in metal door frame installation by adding a recess when "field-dimpling" a frame. Examples of use would be installing a new metal frame in an existing masonry or stud opening. The DT-1 is hardened & uses an allen screw & wrench to smoothly add a dimple to the door frame after it has been drilled. Typically, a frame is "punched & dimpled" three to four times on each side of the door frame. The DT-1 makes the job an easy one with a professional looking fit to the fasteners.

The tool is double-sided; after extensive use some wear may be evident in the threads or face of the tool; simply use the opposite side. Two allen screws and a long-arm allen wrench are also included. **Part # DT-1**

T-HANDLE COVERS

Framon's T-Handle cover keeps out dirt, road grime and salt, extending the life of your customers' lock. Slips over easily and can be moved to the side when locking or unlocking, or simply remove it. Works with most pickup capper T-handles. Sold individually or in our 35 pack assortment. **Assortment PART # BDTCSS1**

MOTORS

12V DC MOTOR

1/10 hp 42 Frame 1800 RPM 3/8" Shaft DC motor used on all 12V Framon machines. An excellent choice when replacing an older motor on other machines. **PART # F3MT002**

110V AC MOTOR

1/6 hp 48 Frame 1725 RPM 1/2" Shaft AC motor used on newer Sidewinder, TKM-100, and DBM-1 machines with enclosed motor, and newer #2 code machines. **PART# DCMT002**

THESE TOOLS MAKE A HANDY ADDITION TO ANY LOCKSHOP. THEY'VE BEEN TESTED REGULARLY IN OUR OWN LOCKSHOP.

BULLSEYE INSTALLATION JIG

Framon is proud to introduce our latest product, the Bullseye Installation Jig. The new installation jig will assist installers with drilling wood or metal doors, both 2-3/8" and 2-3/4" backset. The tool is completely self-contained besides a 3/32" allen wrench to change bore sizes. The tool also features two 1/8" locating holes at 12 & 6 o'clock to locate through bolts on popular lever locks. **PART # BULL**

NOTE: Starting 10/1/2025 the 1 1/2" inserts will be optional.

SFIC PINNING / CAPPING BLOCK (CPB1)

Another great tool from Framon Manufacturing for locksmiths who use interchangeable core. The CPB1 comes with a pinning / capping block, ejecting pin and capping tool. Insert the core into the tool and eject the old pins quickly and easily. Flip the block over to load the chambers and cap the core. Made in the USA. **PART # CPB1**

KABA PEAKS PINNING / CAPPING BLOCK (CPB140)

A great tool for locksmiths using Kaba Peaks .140 cylinders. The CPB140 comes with a pinning / capping block, ejecting pin and capping tool. Insert the core into the tool and eject the old pins quickly and easily. Flip the block over to load the chambers and cap the core. Made in the USA. **PART # CPB140**

6 PIN CAPPING TOOL (CBCAP6)

Add the CBCAP6 to your arsenal (works with the CPB140 Tool) and cap an entire Peaks core with one blow of the hammer. Load all your chambers, insert your caps and drive them in place with this handy addition. **PART # CBCAP6**

7 PIN CAPPING TOOL (CBCAP7)

Add the CBCAP7 to your arsenal (works with the CPB1 Tool) and cap an entire core with one blow of the hammer. Load all of your chambers, insert your caps and drive them in place with this handy addition. **PART # CBCAP7**

QUICK PULL REPLACEMENT BLADES

Framon now offers both Kwikset and Schlage blades for the A1 Quick Pull tool. These replacement blades will fit into the Quick Pull and are steel base material that has been hardened. **Kwikset Replacement Blade PART # QPKW**
Schlage Replacement Blade PART # QPSC

DIAL CALIPERS

6 inch steel dial calipers are easy to read and extremely accurate. Calipers are a must for any serious lockshop whether adjusting a machine or decoding an existing key. Case included. **PART # F2MS451**

DUAL READ DIAL INDICATOR

For locksmiths doing tubular key work, this dial indicator is a must. Use it for decoding keys or checking machine accuracy. Easy to read and simple to use. Graduations in .001" **PART # TKMS451**

QUICK PULL REPLACEMENT BLADES

Framon now offers both Kwikset and Schlage blades for the A1 Quick Pull tool. These replacement blades will fit into the Quick Pull and are steel base material that has been hardened. **Kwikset Replacement Blade PART # QPKW**
Schlage Replacement Blade PART # QPSC

SAFE DEPOSIT KILLER KIT (SDK1)

Framon's new Safe Deposit Killer Kit makes quick & easy work out of drilling S & G and Diebold safe deposit box locks. When traditional methods can't be used due to a plastic or flimsy door the killer kit is your answer. Simply insert the appropriate guide into the keyway and use a hole saw to drill out the face of the plug. Easy entry in minutes. Kit comes with three guides and two-hole saws in an easy to store plastic carrying case. Made in the USA. **PART # SDK1**

TUBULAR LOCK SAW (TLS1)

Framon's TLS1 Tubular Lock Saw allows you to quickly and easily open tubular locks when the key is lost. The TLS1 drills out the bottom pins, giving you the ability to simply insert a blank tubular key and open the lock. The TLS1 fits in any 3/8" or 1/2" drive drill. Call & order yours today! Made in the USA. **PART # TLS1**

WE OFFER A VARIETY OF RESOURCES TO OUR CURRENT & POTENTIAL CUSTOMERS!

LEARN MORE ABOUT FRAMON

First, visit the Framon website at www.framon.com for product information, key machine manuals, and other relevant information.

If you are considering a Framon key machine, visit our YouTube page at www.youtube.com/user/FramonManufacturing. Videos of all of our products are available here including setup and adjustments for many of our machines.

Join our Facebook page by searching for “Framon Manufacturing” or just go to www.facebook.com/FramonMFG. New product announcements and updates are announced using our Facebook page.

For software tech support, we regularly use “FixMe.It” which is a remote login program. Using FixMe.It our customer service person can connect to your computer (as long as an internet connection is present) and quickly diagnose or fix the problem. For quickest results, install FixMe.It prior to calling us by clicking the “FixMe.It” link at the top of our home page.

As always, call us at **989-354-5623** for assistance, tech support or product questions. We are available from 8:00 AM to 4:30 PM Eastern Time, Monday through Friday.

Join our email list to get regular product updates and new information weekly. Just send your email address to sales@framon.com to sign up!
