Global Link

GLRKK Global Link Rekeying Kit

The Global Link Rekeying Kit is your one-stop kit for servicing Global Link brand RV, camper & 5th wheel locks. As locksmiths are aware, frequently these units come with one door key, another rear shower / water inlet key, and another key for the exterior storage compartments. The kit includes 50 cam locks of various lengths and 100 mastered and non-mastered cylinders. Cylinders are pre-coded to four GL series bittings so you can rekey an entire camper to one key for your customer. Also included are the Global change key and 60 precut user keys (15 of each to fit the GL series cylinders included). Replacement housings and cylinders are available to refill your kit. Framon/Blue Dog is also stocking slam lock replacements and entry locks in various colors if the camper does not have Global Link locks currently. Stop turning away this profitable area of lock work!

Lock Housing

Items above that are highlighted in **RED** should be specified with the appropriate Global Link key number you need. If a key number is not specified, we will pick one from stock. Example: RVLC01-G359 for Global Link cylinder code G359.

RV/Camper/5th Wheel Terminology

If you are new to the camper lock world, here are a few things you should understand:

Currently, Global Link, Trimark, and Fastec/FIC/Wesco allow us to sell their master and change keys to locksmiths. These keys are **ONLY** for your use! They are not to be resold to the public! They can be resold to RV dealerships and campgrounds. **NOTE:** Bauer does not allow us to sell change or master keys to our customers.

As for some “key” explanation:

Master Key: Typically the main latch on the camper door works with a master key. Frequently you will see a mark on the lock that will tell you what key fits the lock. Trimark has many different master keys, their locks will have an “E” on the face of the lock (or similar letter) indicating “MKE” is the key that will open the lock. The deadbolt lock is NOT typically set to work with a master key. We get frequent calls about the master key blanks from people who want to cut their own master keys. There are no known blanks that can easily be cut to match a master key that will work without major modification.

Change Key: Also known as the removal or “core” key, this key allows you to remove the cylinder from the lock. When used with our rekeying kit for Global Link locks, you can remove GL cores and replace them in seconds, effectively rekeying a lock for your customer. The rekeying kit only works with GL brand locks, the cylinders will not replace Bauer, Trimark or Fastec/FIC cylinders. In these cases the entire lock body needs to be changed.

“Compartment/Precut” keys: All of the camper manufacturers do or have made use of a few precut keys, such as CH751 (Trimark, FIC, Bauer) and GL391 (Global Link). These keys seem to find their way onto the water inlet and outside shower doors typically, although sometimes they have been used all the way around the camper. They are included in many of our sets.

Complete Change Key Sets: At this time we offer two complete rings of Bauer RV series keys, one complete set of Global Link keys, and two sets of Fastec/FIC keys. These sets include all of the change keys in the listed series. Ideally if you use these sets to find the correct key for a camper, you can simply copy that key onto a blank and supply it to your customer. Some sets include master & change keys as well. See descriptions for full details.

Global Link

Global Link Master / Change / Compartment Key Set

Set includes one Global Link master, change / removal tool, and G391 compartment / precut. G301-G390 Codes / GL391 - 3 Key Set. **Part #BDGLMK**

Global Link Complete Precut Key Set

This set includes one of each key in the G301-G390 as well as a Global Link change (BD986), master (BD985), and compartment key (BD1016).
